Reducing maintenance costs upfront and down the road

Reducing Maintenance Costs Upfront

In GreenBug's Design Models we've given great consideration to reducing upfront capital costs as well as long-term maintenance costs by selecting premium lubricants, "over sizing" bearings to increase NBMA life and using reputable parts suppliers such as SEW, NORD and Dodge.

Every screw generator GreenBug manufactures has expected life values of these major components and is also supplied with a recommended preventative maintenance schedule to extend the life span of these components.

Maintenance Services

When maintenance is required, GreenBug Energy's Maintenance Services are available to service our Archimedes screw micro hydro installations.

Rates for on site maintenance services are hourly plus travel.

Replacement Parts

GreenBug Energy supplies parts for our micro hydro systems.

System Installation records for GreenBug installations or systems sold are kept on file, allowing us to quickly retrieve part information for our custom designed systems if required.

For more complete information on GreenBug Energy products and services, visit us on the web at www.greenbugenergy.com
